

I claim:

1. A dental compound dispenser, said dental compound dispenser comprising:  
a main body assembly, said main body assembly comprising:  
    a main body portion, wherein said main body portion is predominantly configured  
    about a first principal axis,  
    an attachment portion, said attachment portion coupled to said main body portion,  
    said attachment portion disposed to attach to a retraction tool handle, and  
    a compound reservoir, said compound reservoir coupled to said main body  
portion.
2. The dental compound dispenser of claim 1, further comprising a compound dispenser.
3. The dental compound dispenser of claim 2, further comprising a compound container  
disposed predominantly within said compound reservoir.
4. The dental compound dispenser of claim 3, further comprising dental cleaning  
compound, wherein said dental cleaning compound is contained primarily within said  
compound container.
5. The dental compound dispenser of claim 1 wherein said attachment portion comprises  
two or more elastic clips.
6. The dental compound dispenser of claim 1 wherein said attachment portion comprises  
an annulus within said main body portion, wherein said annulus has a second principal  
axis that is substantially parallel to said first principal axis.
7. The dental compound dispenser of claim 3, wherein said compound container is  
adhered to said compound reservoir with adhesive.

8. The dental compound dispenser of claim 5, wherein said elastic clips are fashioned to attach to a cylinder of less than 0.3 inches diameter.
9. The dental compound dispenser of claim 1, wherein said retraction tool is a dental mirror.
10. The dental compound dispenser of claim 1, wherein said attachment portion is coupled to said main body portion in such a manner that the main body portion can be attached to said retraction tool handle such that the main axis of the retraction tool handle is substantially coaxial to said first principal axis.
11. A dental compound dispenser, said dental compound dispenser comprising:  
a main body assembly, said main body assembly comprising:  
a main body portion,  
an attachment portion, said attachment portion disposed to attach to a retraction tool handle, said attachment portion coupled to said main body portion , and  
a compound container, said compound container within said main body portion.
12. A dental compound dispenser, said dental compound dispenser comprising  
an attachment portion, said attachment portion disposed to attach to a retraction tool handle, said attachment portion coupled to a compound reservoir , and  
a compound reservoir.
13. The dental compound dispenser of claim 12, wherein said attachment portion comprises an annulus.
14. The dental compound dispenser of claim 12, wherein said attachment portion comprises one or more elastic clips.

15. The dental compound dispenser of claim 12, wherein said attachment portion is further disposed to attach to a retraction tool handle of approximately 0.3 inches in cross section.
